'Business Environment picks ntl:Telewest for network overhaul'

(DMeurope Via Acquire Media NewsEdge) Business Environment has chosen ntl:Telewest Business, part of the Virgin Media group, for a network consolidation project to delivers resilient voice and data services to companies across the south of England. The overhaul is expected to help Business Environment tackle the effects of the downturn by minimising costs associated with rolling voice and data services into its all-inclusive pricing for clients. The advanced multi-protocol label switching (MPLS) network design allows voice and data traffic to be rerouted via the connection at Business Environment's own London headquarters in the event of a network outage. The internet protocol virtual private network (IPVPN) provided by ntl:Telewest Business delivers a combination of 40 and 60 Mbps connections to all 11 of Business Environment's serviced sites.
